ABSTRACT

A water delivery system is disclosed comprising a showerhead featuring two delivery points, at least one of which
5 has an own on-off valve, and at least a supply tube carrying untreated water, wherein the showerhead features two separate conduits connecting the two delivery points with a coupling at the base of the showerhead handle, the tube featuring inside at least one secondary supply pipe carrying
10 ing treated water, a proximal end of said tube being coupled with a coupling of said showerhead and one distal end thereof being intended to disappear from the user's sight, said distal end featuring two distinct supply ends to be connected with a distribution system of untreated water and
15 to a centralised distribution system of treated water, respectively.
